Abstract (en)
[origin: WO2021152177A1] The invention relates to a textile fabric (1) having a first and a second surface (2, 2') for producing a garment (3) in a predefined size, wherein a cutting pattern (4) with parts (4) for tailoring the garment (3) is visually identifiable on one of the surfaces (2, 2'). According to the invention, in the production process, on account of the weaving of the warp and weft threads (6, 7), markings (8) are formed on one of these surfaces (2, 2') by a change in colour or pattern (9), said markings (8) indicating cutting and/or stitching lines (10, 11) for the individual parts (4) of the cutting pattern (4). The cutting pattern (4) outlined in this way differs from the dimensions of the subsequent garment (3) by less than 3% and less than 1 cm both in the direction of the warp threads (6) and in the direction of the weft threads (7). The invention also relates to a garment (3) produced from such a fabric (1).
