Abstract (en)  
[origin: WO2021151697A1] The invention relates to a hinge (4) for an item of furniture or a domestic appliance (1), comprising: a first hinge part (5) and a second hinge part (6), which are interconnected via a lever mechanism having seven articulation pins (7) and levers (8) articulated thereon; wherein the first hinge part (5) comprises a first connecting piece (51) and the second hinge part comprises a second connecting piece (61) which are arranged so as to be substantially parallel and spaced apart in a closed position of the hinge (4); and a cover element (10) at least partially covers the lever mechanism on at least three sides in order to make it impossible to reach between the levers (8) of the lever mechanism; wherein a plurality of cover plates (11, 12, 13) are formed integrally with the cover element (10), and the cover plates (11, 12, 13) arranged on one side of the lever mechanism can be partially overlappingly pivoted relative to one another when the hinge (4) is pivoted. The possibility of reaching into the lever mechanism is thereby prevented.
