Abstract (en)

[origin: WO2021180470A1] The invention relates to a quality assurance method for an example-based system (1). To improve the quality assurance, the method involves the example-based system (1) being created and trained on the basis of collected examples (22) that form a set of examples. The respective example (22) in the set of examples comprises an input value (12) that is situated in an input space (20). A quality assessment representing a coverage of the input space (20) by examples (22) in the set of examples is ascertained (C) on the basis of the distribution of the input values (12) in the input space (20).
