Abstract (en)

[origin: WO2021152451A1] The invention relates to a computerised system for accessing to a vehicle. The computerised system comprises: - a vehicle key comprising a control unit, a first wireless communication module operatively connected to said control unit and adapted to allow said control unit to communicate with a control system of said vehicle, a second wireless communication module operatively connected to said control unit and adapted to allow said control unit to communicate with a mobile computerised device; - a software application which can be stored on and executed by at least one mobile computerised device, said software application being configured to control said control unit to interact with said control system to cause the unlocking of one or more doors of said vehicle. In a further aspect, the invention relates to a computerised method for accessing to a vehicle.
