Abstract (en)
The invention concerns an aerosol generating consumable (14) comprising:- a flavouring portion (24) configured to generate a flavoured aerosol;- a cartomizer portion (26) configured to generate an aerosol vapour;- an airflow path (28) comprising an upstream part extending through the cartomizer portion (26) and a downstream part extending through the flavouring portion (24).The cartomizer portion (26) comprises a reservoir (54) storing an aerosol vapour precursor and a cartomizer heater (56) configured to heat the aerosol vapour precursor to form the aerosol vapour and release it into the upstream part of the airflow path (28).The flavouring portion (24) comprises a storage portion (36) storing a flavoured aerosol precursor under pressure, and a releasing mechanism (38) configured to release the flavoured aerosol precursor from the storage portion (36) to form the flavoured aerosol in a mouthpiece section (34).The flavouring portion (24) further comprises a flavouring heater (40) arranged in the mouthpiece section (24) and configured to heat the flavoured aerosol.
