Abstract (en)  
[origin: WO2022254157A1] The invention relates to a vacuum cleaner suction head (2) comprising a base (3); a fork (6) hingedly mounted onto the base (3) via a front pivot connection (P1) defining a front pivot axis (X1); two main wheels (11) mounted so as to rotate on the fork (6) about a wheel axle (A); a connecting sleeve (12) to which a suction tube of a vacuum cleaner is intended to be attached; and a connecting member (14) mechanically connecting the connecting sleeve (12) to the fork (6), the connecting member (14) being hingedly mounted onto the fork (6) via a central pivot connection (P3) defining an axis of rotation (X3) which transversely extends to the front pivot axis (X1), and the wheel axis (A) intersects with the connecting member (14).
