Abstract (en)

[origin: WO2022254155A1] The invention relates to an accessory which comprises: a suction tube (7); a grip handle (11) hingedly mounted on the suction tube (7) between a first handle position and a second handle position; and a cover (17) movably mounted between a covering position in which the cover (17) at least partially covers the hinge area (14) and a release position in which the cover (17) at least partially uncovers the hinge area (14) and allows the grip handle (11) to be pivoted into the second handle position. The accessory is configured such that the cover (17) occupies the covering position when the grip handle (11) occupies the first handle position, and such that a movement of the grip handle (11) from the first handle position to the second handle position causes the cover (17) to move from the covering position to the release position.
