Abstract (en)

Support and plate assembly for holding waste containers, comprising an assembly that incorporates a holding device (1), and includes a magnetic element (5) in the form of a fork (3) that allows attachment to a waste container (2) with a lid (8) by means of at least two galvanised plates (6) and (7), inside and outside ones, that are installed on the front of said container, in such a way that their housing provides vertical, orbital and slightly horizontal movement, which favour the optimal connection to the waste container. The invention also allows installation on slopes and uneven areas, the container-holding device incorporates two independent housings with at least 3 different height settings, in order to regulate and mount the device in the most favourable connection position when the container is inclined.
