Abstract (en)

[origin: EP4098788A1] Disclosed in the present application are a laundry treatment device, a control method and apparatus thereof, and a storage medium. The control method comprises: controlling the laundry treatment device to carry out dehydration multiple times, wherein each dehydration ends when the rotating speed of an inner drum of the laundry treatment device returns to zero, and within a time interval between two adjacent dehydrations, the inner drum is controlled to rotate clockwise and counterclockwise alternately. Because the dehydration is performed multiple times in a dehydration stage, the dehydration time corresponding to each dehydration is shortened, so that the probability of the situation that the laundry is attached to the inner wall of the inner drum is reduced; each dehydration ends when the rotating speed of the inner drum of the laundry treatment device returns to zero, and within a time interval between two adjacent dehydrations, the inner drum is controlled to rotate clockwise and counterclockwise alternately, so that the laundry in the inner drum is shaken and untangled evenly, and the probability of the situation that the laundry is attached to the inner wall of the inner drum is further reduced. The phenomenon of attaching to the drum caused when the laundry is attached to the inner wall of the inner drum in the existing dehydration process is effectively improved, and the subsequent laundry drying is facilitated.
