Abstract (en)  
[origin: WO2021156220A1] A folding stick (1) having four or five tubular portions (7-9), wherein, when the folding stick (1) is assembled, the tubular portions (7-9) are connected to one another by plug-in connections and oriented along the stick axis (32), and, when the stick is folded up, at least two or three tubular portions (8, 8', 9) are connected to one another only by a movable connecting element (16), and wherein a stick handle (2) is arranged on an uppermost tubular portion (7), and a stick tip (23) is arranged on a lowermost tubular portion (9). The folding stick is characterized in that a conical closure plug (18) having an axial through-opening (64) is releasably inserted, preferably screwed, into the plug region (49, 17") of the plug-in connections, and closes off the latter with respect to the following tubular portion, and wherein each of these conical closure plugs (18) has an axial slit (63) through which the pull cable (16) can be introduced into the through-opening (64) in the radial direction.
