Abstract (en)
[origin: WO2022180015A1] The invention relates to a device (2) for administering medical liquids, comprising a receiving region which is suitable for accommodating a hollow body that contains the liquid to be administered, a cover (4) which is movably connected to the receiving region between an opened position and a closed position, and a drive (8) which is suitable for acting upon the hollow body accommodated in the receiving region in such a way that the liquid contained in the hollow body is conveyed, wherein the device (2) comprises a display unit (10) for graphically representing the filling level of the hollow body, which is suitable for displaying the filling level of the hollow body on the basis of one or more operating parameters of the drive, which are in particular relevant for conveying the liquid. The invention further relates to a method for administering medical liquids.
