Abstract (en)
[origin: WO2021156705A1] The present invention relates to a bottle neck, comprising a peripheral wall and an aperture that is delimited inside a top edge of the peripheral wall. The bottle neck also includes at least one outer thread located around the peripheral wall, the outer thread having a top end, and an offset located under the top edge and laterally extending from the peripheral wall to a border of the top edge. The bottle neck comprises at least one slope located along the offset and over the outer thread, and the at least one slop extends from the peripheral wall to the border of the top edge in an outward inclined way.
