Abstract (en)
[origin: WO2021155475A1] A slide feature for an amusement ride is disclosed. The slide feature includes at least first and second flumes, each flume having a respective inrun permitting ingress of riders or ride vehicles and a respective outrun permitting egress of the riders or ride vehicles. Each flume defines a separate ride path for the riders or ride vehicles and each of the flumes is arced. The second flume is one or both of a) radially outward of the first flume and b) upward of the first flume. The first and second flumes share a common lane boundary along at least a portion of the first and second flumes, the common lane boundary permitting visibility between the flumes.
