Abstract (en)

[origin: WO2021156208A1] Disclosed is a device (1) for connecting two parts of a hull (3) of a ship, comprising: - a first frame (2) intended to be integral with a first part (30) of the hull (3), - a second frame (4) intended to be integral with a second part (31) of the hull (3) - a tenon (5) integral with the first frame (2) - a mortise (6) provided in the second frame (4) and able to receive the tenon (5) promoting a relative movement in translation of the two frames (2, 4) towards one another in a longitudinal insertion direction, - a pin (8) which is able to be engaged, on the one hand, in a transverse housing (21) provided in the second frame (4) and opening into said mortise and, on the other hand, in a transverse through-hole (54) provided in the tenon (5), so as to retain the tenon (5) in the mortise (6). Also disclosed is a hull of a ship comprising such a device.
