Abstract (en)

[origin: WO2021158712A1] A computer implemented method for increasing diet management and adherence is provided. The method includes selecting a user position, an unfavorable position, and an unfavorable period of time; determining whether the user position and the unfavorable position are equal during the unfavorable period of time; and presenting, via the electronic device, an alert to the user if the user position and the unfavorable position are equal during the unfavorable period of time.
