Abstract (en)
The present invention refers to a flagpole, preferably a rigid flagpole, which can be mounted on the external wall of a building or similar. The rigid pole comprises at least two longitudinally connected tubes arranged to rotate against each other, first tube (5) and second tube (6), whereby the ability of the tubes (5, 6) to rotate against each other is achieved by one, preferably at least two, optionally more, bearing means (7), which are fixed individually or in pairs longitudinally inside each of the tubes (5, 6), which are mutually fixed in position by means of a connecting pole (8) extending approximately along the entire length of the pole (1), whereby the second tube (6) comprises a flange at its free end (13) that comprises the end element (12), and whereby the pole (1) features at least one additional drip-off element (15).
