Abstract (en)
A heat pump heat source device including: a refrigerant circuit 4 composed of at least a compressor 2 and a heat source-side heat exchanger 3; a blower 5 for generating air which exchanges heat with the heat source-side heat exchanger 3; a partition plate 6 for partitioning the compressor 2 and the blower 5 from each other; a first grill 11 for covering the compressor 2 from front; a second grill 12 which is placed in parallel to the first grill 11 and which covers the blower 5 from front; and a main body 1 provided with at least the compressor 2 and the blower 5 therein, wherein a portion where the first grill 11 is fastened to the main body 1 through fastening means is only a portion where the first grill 11 forms a ceiling surface and/or a side surface of the main body 1. According to this, a heat pump heat source device which is excellent in design and maintainability is provided.
