Abstract (en)
An application program generation method and apparatus are provided. In the method, the application program generation apparatus determines one or more target modules, where the target module is configured to implement a different function in the application program, and the one or more target modules include a data management module, where the data management module is configured to invoke target data in an electronic device on which the application program is installed; reads, from a code library, software code corresponding to the target module; and generates the application program based on an application program basic framework and the software code corresponding to the target module, where the application program basic framework includes basic software code required for generating the application program. The method can automatically generate the application program, and after the application program is installed on the electronic device, the target data in the electronic device can be obtained, to facilitate collection of the target data.
