Abstract (en)

[origin: WO2021160513A1] A fastening device for fixing a sliding element on a displaceable rail (2, 22) of a pull-out guide (20) comprises a crosspiece-like retaining part (6, 24) and a clamping mechanism with a mount (7, 33), the clamping mechanism being provided with at least one self-locking clamping element (10, 30), by means of which the crosspiece-like retaining part (6, 24) fitted into the mount (7, 33) is secured in a friction-fitting manner against being pulled out, wherein the crosspiece-like retaining part (6, 24) has formed on it at least one stamped formation (6, 25), against which the clamping element (10, 30) lies. This makes it possible for the crosspiece-like retaining part (6, 24) to be fixed in a stable manner on the mount and to be easily removed.
