Abstract (en)

[origin: WO2021160836A1] The invention relates to a suspending device (1) for presenting objects, comprising a plurality of vertical profiles (21), a plurality of horizontal profiles (22), and at least one primary support (3). The vertical profiles (21) and the horizontal profiles (22) are assembled to form a grid section. The grid section comprises a plurality of cells, each of which is surrounded by segments (211, 221) of two of the horizontal profiles (22) and two of the vertical profiles (21). The cells (23) of the grid section (2) are open at least at a front side. The primary support (3) comprises a mounting portion (31) to be detachably hung in the grid section, and a support portion (32) for arranging at least one of the objects. The mounting portion (31) of the primary support (3) comprises a hook part (311) and a supporting part (312). The hook part (311) of the mounting portion (31) of the primary support (3) is shaped so as to at least partly surround one of the horizontal profiles (22). The supporting part (312) of the mounting portion (31) of the primary support (3) is shaped so as to abut one of the vertical profiles (21), whereas the hook part (311) of the mounting portion (31) of the primary support (3) at least partly surrounds one of the horizontal profiles (22).
