Abstract (en)

[origin: WO2021160868A1] Tool (2) for crimping an element (2) onto a support member (3), comprising a movably mounted rod (7), a first chamber (8) containing a first fluid (9), a second chamber (10) containing a second fluid (11), a piston (12) movably mounted inside the second chamber (10) and separating the second chamber (10) into first and second compartments (30, 31), an input terminal (13) suitable for being connected to a second fluid (11) source, and a main valve (14) configured to direct the second fluid (11) into the second compartment (31) in order to move the piston (12) to reduce the pressure of the first fluid (9) and drive the rod (7) in a direction opposite to a crimping direction.
