Abstract (en)  
[origin: US2021253299A1] The present disclosure is directed to a dispensing assembly for dispensing articles, such as disposable eyewear (e.g., face shields, safety glasses, goggles, etc.), face masks, gloves, etc. The dispensing assembly includes a container having a plurality of exterior panels. The exterior panels define an internal chamber and a dispenser opening on the container including a first portion and a second portion defined by a flap on one of the plurality of external panels. The dispensing assembly also includes a folded portion contained within the internal chamber. The folded portion includes a plurality of folded sections configured together and is disposed adjacent an article storage area. The article storage area is configured to receive a plurality of articles. The flap functions as a retention mechanism and the folded portion functions as a ramp to facilitate the removal of an individual article from the article storage area within the internal chamber in an efficient manner.
