Abstract (en)

[origin: WO2021160427A1] Disclosed is a plug contact element (1) for producing an electrical connection between two components, in particular between at least one component and a printed circuit board (6), the plug contact element (1) being produced by stamping (12). The problem addressed by the invention of providing a plug contact element that can be produced particularly simply and that has improved functionality, is solved by the provision, on the plug contact element (1), of at least one pin element (3) and/or at least one female contact element (4) for connection to at least one component, and of at least one plug element (5) for making direct contact with a printed circuit board.
