Abstract (en)
[origin: US2022402156A1] A whetting device is for a slicer. The whetting device has: a whetstone that sharpens a circular blade of the slicer; a hone that deburrs the circular blade; a handle that moves the whetstone or the hone toward the circular blade; and a mount for fastening to a stop plate of the slicer. The mount has an insertion apparatus for being form-fittingly inserted into the stop plate. The mount having a U-shaped plate receptacle, which has a gap for introducing the stop plate into the gap in when the whetting device is pushed onto the stop plate. The insertion apparatus has a lug for engaging in an recess in the stop plate, or the stop plate has the lug for engaging in the recess in the insertion apparatus.
