Abstract (en)

[origin: WO2021165564A1] The invention relates to a method for detecting a maintenance person (106) within an area (204) of a people flow equipment (206). The method comprises: defining (402) a virtual boundary around the area of the people flow equipment; receiving (404) position information of a mobile device (104) carried by the maintenance person (106); detecting (406) an entry of the maintenance person into the virtual boundary based on the received position information; and generating (408) at least one control signal comprising information representing the detection of the entry of the maintenance person (106) into the area (204) of the people flow equipment (206) to a remote monitoring entity (102). The invention relates also to a system (100) for detecting a maintenance person (106) within an area of a people flow equipment (206) and a computer program (525) and a computer-readable medium.
