Abstract (en)
[origin: WO2021164965A1] The invention relates to an oscillating winding mass (1) for a timepiece movement, the oscillating winding mass (1) being designed to be mounted so as to rotate on a movement axis, characterised in that it comprises a main element (2) and a decorative element (10), for example a logo or an abbreviation, a portion of the winding mass (1) forming a heavy portion (3) allowing the mass (1) to oscillate in response to the movement of the timepiece and the force of gravity, the main element (2) providing the general shape of the oscillating winding mass (1), the decorative element (10) being mechanically linked to the main element (2), the decorative element (10) being mounted so as to rotate on the main element (2).
