Abstract (en)

[origin: CA3170644A1] The proposed technique relates to a method for controlling the display of information on a screen of the data-input electronics device. The electronic device is intended to be used for implementing an operation involving the performance of a succession of actions and involving a plurality of users. According to the proposed technique, the method comprises: - a step (11) of detecting a predetermined event associated with the electronic device, delivering a signal that is representative of a detection of the predetermined event; - a step (12) of rotating the display of information on the screen of the electronic device through 180°, as a function of the signal representative of detecting the predetermined event and a piece of state information associated with the electronic device.
