Abstract (en)

[origin: WO2021165490A1] The present invention relates to a battery module (1) for constructing a battery system for a vehicle, the battery module having at least one battery cell and a battery management controller (BMC) comprising a battery management controller interface (BMCS), wherein the battery management controller interface (BMCS) has at least two address contacts for assigning an address to the battery module, and the battery management controller (BMC) is designed and configured to identify an address assigned to the address contact and from this, to derive an address for the battery module.
