Abstract (en)

[origin: WO2021165612A1] The invention relates to a method for controlling access to a function of an application implemented by a device for controlling access to a function of an application, this control device being registered to a blockchain, the method being characterised in that it comprises: - a step of receiving, from a first terminal, a first request to access at least one first function of the application, the application being registered in the blockchain, the request comprising at least one first identifier of the at least one first function and at least one identifier of the first terminal; - a step of transmitting a response to the access request comprising at least one parameter for accessing the at least one first function and at least one second identifier of at least one second function registered in the blockchain, the at least one second identifier being associated with the at least one parameter.
