Abstract (en)

[origin: WO2021165116A1] The invention relates to a vehicle component (10) for providing at least one service in a vehicle (1), having: - a processing unit (20) for carrying out data processing in order to perform the at least one service, - a data interface (30) for connection to at least one data transmission network (2) of the vehicle (1) in order to receive and/or transmit data for the data processing during the performance of the service and in order to receive a service identification message (210) for service co-ordination in the data transmission network (2), - a prefilter unit (40) for carrying out a relevance test (110) of the received service identification message (210), in order to relay the service identification message (210) to the processing unit (20) depending on the relevance test (110).
