Abstract (en)

[origin: EP4108358A1] Apparatus for deforming two opposite ends (1a,1b) of a piece of wire (1) extending in a longitudinal direction (X-X), comprising a first device (1000) for forming the first end (1a) of the piece of wire (1), configured to form the first end (1a) by means of cold-deformation, such as to produce a cross-section of the first end with an area greater than the cross-section of the initial piece of wire; and a second device (2000) for forming the second end (1b) of the same piece of wire (1), configured to perform forming of the second end (1b) by means of cold-deformation such as to produce a cross-section of the formed second end greater than the cross-section of the initial piece of wire.
