Abstract (en)
This disclosure relates to an electronic device (30) and to a method for at least partially improving operation of one or more parts of a spinning mill (M) on the basis of event messages (1011, 1012, 1013, 1014, 1015, 1016) related to the one or more parts of the spinning mill (M). The electronic device (30) is configured to receive event messages (1011, 1012, 1013, 1014, 1015, 1016) related to the one or more parts of the spinning mill (M), to determine recurring event messages (3011, 3012, 3013, 3014, 3015) and assign frequency information (F) and/or time information (T) to the recurring event messages (3011, 3012, 3013, 3014, 3015), and to process on the basis of the frequency information (F) and/or the time information (T) one or more recurring event messages (3011, 3012, 3013, 3014, 3015) for determining information for at least partially improving operation of the spinning mill (M).
