Abstract (en)

[origin: CN115434223A] The invention relates to a method for controlling a road milling machine when an obstacle is in the ground to be milled, the road milling machine comprising a milling roller and a tail cover, the method comprising the steps of: a) milling the ground in a working direction at a predetermined milling depth, b) approaching the road milling machine to the obstacle in the ground in the working direction, the milling roller and the tail cover are lifted out of the ground in front of the obstacle in the working direction, d) the milling roller is kept out of contact with the obstacle, and e) the milling roller and the tail cover are lowered to a preset milling depth behind the obstacle in the working direction and the ground continues to be milled, characterized in that the road milling machine is controlled, in step c), the lifting of the milling roller is carried out before the tail cover is lifted out of the ground, and the road milling machine continues to move in the working direction between the lifting of the milling roller and the lifting of the tail cover. The invention further relates to a road milling machine for carrying out the method.
