Abstract (en)
[origin: EP4108844A1] A construction system based on a common connector that is conceived to join a large variety of structural elements. The connector has two equal plates with an open trough that are designed to be affixed on wall sections or similar structural elements and plugs that enter in the troughs and are designed to be affixed on a horizontal element such as a sill, a joist or a beam. The connector can be locked by a wedge key that is configured to disappear below the wall side when in place.
