Abstract (en)
A recessed handle (1) with double opening system for doors (5) is described, comprising at least one opening/closing element (3) operatively connected to a door (5), said opening/closing element (3) being designed to bring said door (5) into its open and/or closed operating position by inserting a user's finger into a recess (7) of the recessed handle (1) and/or by lifting the opening/closing element (3) from an encumbrance of the door (5).
