Abstract (en)  
[origin: WO2021170298A1] A polishing tool (1) that is improved in respect of its handling and with regard to more efficient work input and is intended to be driven in rotation about an axis of rotation (2) by a drive machine is proposed, having a carrier body and a polishing body attached to the carrier body, wherein the polishing body comprises a number of first lamellae (3) and at least a number of second lamellae (4), wherein the first lamellae (3) comprise a polishing felt and the second lamellae (4) comprise a nonwoven, wherein the nonwoven is formed substantially from synthetic fibres and wherein the nonwoven exhibits greater porosity than the polishing felt.
