Abstract (en)

[origin: WO2021170721A1] The invention relates to a base ship (1) that can receive, in a removable and interchangeable manner, a particular module (3) among various modules, the module being adapted to a functional specialisation of the ship. The base ship is similar to a catamaran in its rear portion because it comprises two parallel rear lateral volumes that are substantially symmetric with respect to a vertical longitudinal sagittal plane of the base ship, and the removable module is inserted and secured between the two rear lateral volumes of the base ship in order to form a functionalised ship.
