Abstract (en)  
[origin: WO2021174209A1] Provided are sulfated pillarerenes and methods of making and using same. The pillarerenes have macrocycle core having a plurality of aryl groups, attached (e.g., covalently bonded) in a para orientation to the adjacent methylene groups. The pillarerenes have a hydrophobic cavity. The hydrophobic cavity may be used to sequester various materials or to deliver materials sequestered therein.
