Abstract (en)

[origin: WO2021050015A1] The present invention relates to a rotary control element for a domestic appliance, in particular an oven comprising an inner ring (10) and a radially distant outer ring (20) rotatable with regard to each other, and a mechanical switch turned on or off to selectively conduct electric signals when triggered by the rotary motion between the inner ring (10) and outer ring (20) at a preset angle. The control element further comprises an inner chamber (1) confined between an empty radial inner wall (12) of the inner ring (10) and an outer periphery (22) of the outer ring (20) facing the inner wall (12) in which a plurality of mechanical switch elements (40) are disposed in a radially adjacent manner.
