Abstract (en)
[origin: WO2021170362A1] The invention relates to a method for producing a product in a technical plant (5), wherein: after receipt of an order for the production of the product, components required for producing the product are identified, and work steps required for producing the product are identified; identified components and identified work steps are entered into a product file (20), and the product file (20) is stored on a transport system (10); after the product file (20) has been stored on the transport system (10), the components entered in the product file (20) are acquired by the transport system (10), and the acquisition of each component is documented in the product file (20), and the work steps entered in the product file (20) are executed, and the execution of each work step is documented in the product file (20); and the product file (20) remains on the transport system (10) until the acquisition of each component entered in the product file (20) is documented in the product file (20) and until the execution of each work step entered in the product file (20) is documented in the product file (20). The invention also relates to a technical plant (5) for producing a product, which plant is designed to carry out the method according to the invention and comprises at least one transport system (10) which has a digital data memory (12) on which the product file (20) can be stored.
