Abstract (en)

[origin: WO2021190792A1] The invention relates to a method for checking a transport journey of a user (1), the transport journey being booked by the user (1) at a starting point (SP) by means of an electronic management system (2), and the transport journey being carried out from the starting point (SP) to a destination (ZO) to be reached. A planned completion of a first route portion (4) of the transport journey is carried out using the autonomously driving vehicle (3), it being planned that a completion of a second route portion (5) of the transport journey is carried out using an alternative means of transportation (6) to the autonomously driving vehicle (3). By means of the electronic management system (2), it is checked whether the completion of the second route portion (5) can be carried out using the alternative means of transportation (6) at the transfer point (US), and if the alternative means of transportation (6) is not available at the transfer point (US), the transport journey is continued toward the destination (ZO) by means of the autonomously driving vehicle (3). The invention also relates to an electronic management system (2).
