Abstract (en)

[origin: WO2021170795A1] Said mobile signal light (1) for use on a building site comprises a light head (3) provided with one or more light signals, and a frame (7) provided with ground-connecting members (9, 11, 13). The light head (3) is rotatably movable relative to the frame (7) between a raised position and a folded position, and the frame (7) defines a space for accommodating the light head (3) in the folded position, in which the light head (3) does not protrude from the space for accommodating the frame (7). The signal light (1) also comprises means for slowing down the rotation of the light head (3) between the unfolded position and the folded position thereof.
