Abstract (en)

This application provides a control element display method and apparatus, a device, a medium, and a program product, and relates to the field of graphical user interfaces. The method includes: displaying a graphical user interface (GUI) (210), the GUI (210) including a virtual character (24) located in a virtual environment and a control element (23); updating a display position of the virtual character (24) on a GUI (220) as the virtual character (24) moves in the virtual environment; and increasing a transparency of the control element in accordance with a determination that the control element (23) blocks the display position. This application enables a user to observe the virtual character blocked by the control element, and dynamic change of the transparency of the control element is more likely to attract the user's attention, so that the user does not miss important information.
