Abstract (en)
The invention consists of a non-plastic sheet, intended to establish a means of protection for objects with flat surfaces on which it is applied, primarily books but also others like notebooks, magazines, albums, photos, drawing sheets, documents, folders, boxes, etc. It is an ecological sheet that is composed of a cellophane film or vegetable parchment (2) made from cellulose. On one of its faces, it has an adhesive layer (3), which allows it to be adhered to the flat surface of the object to be protected. On this is a layer of siliconized paper (4) that is removed at the time of use, which prevents the adhesive layer (3) from deteriorating prior to application. Thus, an eco-friendly product is obtained that can be recycled, along with the object to which it is applied.
