Abstract (en)
[origin: WO2023275151A1] The invention relates to a coupling device (1) for connecting carriage elements of a goods carriage, comprising a coupling rode (2) and two linkages (3) arranged on the coupling rod (2) at the ends for connecting the coupling rod (2) to a respective carriage element, wherein the coupling rod (2) comprises a first coupling rod part (T1) and a second coupling rod part (T2), wherein the coupling rod parts (T1, T2) have a respective at least one circumferential groove (26) and/or a circumferential ridge at the second end (24), wherein the coupling device (1) also has an openable clamp (25) for interlockingly connecting the two coupling rod parts (T1, T2), wherein, in the closed state, the clamp (25) engages around both the second end (24) of the first coupling rod part (T1) and the second end (24) of the second coupling rod part (T2) and engages into the grooves (26) or engages over the ridges in order to interlockingly connect the coupling rod parts (T1, T2), and wherein, in the open state, the clamp (25) releases the two coupling rod parts (T1, T2) in order to separate them.
