Abstract (en)

A fluorinated polymer suitable for deposition is provided. A film containing such a fluorinated polymer as a material is provided. A method for producing a film, by which such a film can readily be produced, is provided. Further, an organic photoelectronic element having such a film in its structure is provided. A fluorinated polymer which satisfies the following requirements (1) to (3):(1) the melting point is 200 °C or higher,(2) the thermogravimetric loss rate when the temperature is increased at a temperature-increasing rate of 2 °C/min under a pressure of 1×10⁻³ Pa, substantially reaches 100% at 400 °C or lower,(3) when the temperature is increased at a temperature-increasing rate of 2 °C/min under a pressure of 1×10⁻³ Pa, the temperature width from a temperature at which the thermogravimetric loss rate is 10% to a temperature at which it is 90%, is within 100 °C.
