Abstract (en)  
The present invention relates to an eccentric locking mechanism for an electronic lock, comprising: a stator body (1) with an inner core (1a); a borehole (2) that houses a locking pin (3) and a spring (4); a rotor insert (5) housed in the core (1a), and with a first region (5a) for engaging with a transmission mechanism between the rotor and rotor insert and with a second region (5b) provided with recesses (6) in contact with the pin (3); a bushing (7) attached to an eccentric (10), which is arranged externally to the rotor insert (5) and provided with locking openings (8); and coupling means (9a, 9b; 9c, 9d) for coupling the rotor insert (5) to the bushing (7) during activation of the lock.
