Abstract (en)
[origin: CN115538882A] The present invention relates to a pivot drive, the object of which is to provide a compact and robust configuration with an integrated control system while minimizing the wear parts as much as possible. The aim of the pivoting drive according to the invention is achieved in that the drive device is arranged within the pivotable tube and the drive device has a linkage flange and a stop flange, the stop flange being operatively connected to the linkage flange and the linkage flange and the stop flange each having a stop, therefore, the rotary motion transmitted to the pivotable tube by the driving device is limited by the stop part.
