Abstract (en)
A method of verifying processing logic of a graphics processing unit, the method comprising: receiving a test task at the graphics processing unit, the test task comprising a predefined set of instructions for execution on the graphics processing unit, the predefined set of instructions being configured to perform a predetermined set of operations on the graphics processing unit when executed for predefined input data; in a test phase, processing the test task by executing the predefined set of instructions for the predefined input data first and second times at the graphics processing unit so as to, respectively, generate first and second outputs; and raising a fault signal if the first and second outputs do not match.
