Abstract (en)

[origin: WO2021175354A1] The invention relates to a pallet apparatus (10) for storing and transporting system scaffolding components, such as system scaffolding setting frames (42), scaffolding tubes or the like, comprising a base frame device (12) which has a polygon-like, in particular square-shaped, peripheral contour, in each of the corner points of which a support foot (14) is connected, wherein each support foot (14) has, on a top side, a connection unit for a profile rod, characterised in that a support frame device (20) is provided in each case at two opposite side regions of the base frame device (12), which support frame device is positioned in a vertical direction (H) perpendicularly to the plane of the base frame device (12) and comprises a first and second frame strut (22, 24), which extends in the vertical direction (H) and is connected, in its lower region, to a support foot (14), and a frame transom (26), which extends in the transverse direction (Q) and connects, in the upper end region, the first and second frame strut (22, 24), and the frame transom (26) comprises, at the top side, a plurality of support receptacles (30.1, 30.2), which are spaced apart in the transverse direction, for supporting system scaffolding parts, in particular leading railings.
